

Ed. by Sylvie Hancil, Alexander Haselow, Margje Post

# FINAL PARTICLES

This volume brings together sixteen in-depth studies of final particles in various languages of the world, offering a rich variety of approaches to this still relatively underresearched class of elements.

The volume is of interest to typologists, to experts in syntax and the analysis of spoken language, and to linguists studying the form and function of final particles in single languages.

*Final particles* offers an overview of the different types of final particles found in typologically distinct languages, different methodological approaches to the study of final particles, and of typical grammaticalization pathways that these elements have taken in different languages.

**Sylvie Hancil**, University of Rouen, France and **Margje Post**, University of Bergen, Norway.
